

41-round differential Distinguisher of probability $2^{-122.98}$

- This key bit is guessed by the upper part of the attack
- This state bit can be computed by the upper part of the attack
- This key bit is guessed by the upper part of the attack
- This state bit is guessed by the lower part of the attack
- This key bit can be computed by the lower part of the attack
- This state bit is guessed by the lower part of the attack
- This difference on this bit is 0
- This difference on this bit is 0
- This difference on this bit can be 0 or 1
- This difference on this bit is considered 0 by probabilist propagation
- This bit takes all possible values
- The value of this bit is fix for a specific structure
