

- : This key bit is guessed by the upper part of the attack
- : This state bit can be computed by the upper part of the attack
- : This state bit is guessed by the upper part of the attack
- : This key bit is guessed by the lower part of the attack
- : This state bit can be computed by the lower part of the attack
- 0 : The difference on this bit is 0
- $\boxed{1}$: The difference on this bit is 1
- ? : The difference on this bit can be 0 or 1
- $\boxed{\mathbb{P}}$: The difference on this bit is considered 0 by probabilist propagation
- : This bit takes all possible values
- : The value of this bit is fix for a specific structure
